

R4 Clinical+ also includes:

E-Forms

Your practice can be paper-free

E-Forms is a brand new feature within R4 Clinical+ which is designed to eliminate all patient centred paperwork within the practice.

Patient forms are sent by email, filled in online.

When an appointment is made with a patient R4 will automatically send an email at a predefined number of days before their appointment informing them they have a form or forms which need to be completed or updated.

The patient clicks a link on the email and is taken to the patient home page where the forms needing completion (for instance medical questionnaire or consent forms) are listed; this is obviously after the patient has gone through security screening.

The patient then accesses the form which will be displayed on the screen for completion.

Once the form is finished the patient simply clicks submit and the form is sent directly to your R4 database.

Back in the practice you can open the forms and see any changes which have been made.

If the changes are accepted, the new information is added to the patients R4 record.

Notes can even be made and stored about the changes.

The forms are digitally signed at your practice when they next visit. When the patient attends their appointment, they can access the form on a touch screen (normally in reception) and sign the form electronically, completely eradicating the need for paper forms.
