

Kodak OrthoTrac

Practice Management Software Add-on Modules

Kodak OrthoTrac practice management software is designed to be easy to use, with the flexibility needed to meet the unique demands of orthodontic practices today. We understand that every practice is different, so we offer add-on modules that allow you to customize and expand the power of your software when you're ready.

More options mean greater flexibility.

Additional modules are available to help meet the specific needs of practices of almost any size. These practice enhancing tools can help bring even greater efficiency to your practice, allowing you to focus on what really matters—providing quality patient care.

Add-on modules available with OrthoTrac software

Kodak OrthoTrac charting module

Use the charting module chairside for a comprehensive view of the patient's treatment card, treatment plan, arch wire and elastic history, images, and questionnaires. No more pulling patient charts or notes from the front desk.

Kodak OrthoTrac patient flow module

Our patient flow module helps reduce patient wait time and maintain an on-time schedule by giving everyone on your team a continuous overview of patients as they move through your office.

Kodak OrthoTrac collections module

Are you effectively managing your accounts receivable? With our collections module, you can view past due accounts, enter promises of payment, and maintain a complete audit trail of your collection activities.

Kodak OrthoTrac timeclock module

Increase your staff productivity with the timeclock module. No more guessing where your team members are. The timeclock module even generates time reports to make payroll processing easier.

Kodak OrthoTrac mobile practice management module

Get organized with our mobile practice management module. Through a hand-held computing device, you can review your schedule statistics, end-of-day callbacks, and referral data. Extend the benefits of remote access to your office.

Kodak OrthoTrac point-of-care module

Our point-of-care module provides an all-in-one clinical interface to OrthoTrac software. It lets you take advantage of the freedom and flexibility offered by wireless tablet PCs to help increase workflow efficiency and improve patient care. However, it is fully operational on desktop PCs as well.

The point-of-care module utilizes the patient flow and charting modules to give instant access to patient information and to help manage your patients in the clinical area. You can easily post treatment information, view and discuss x-rays with patients, and generate correspondence to referring doctors – all without leaving the exam room.

Support and guidance you can rely on.

Just like our OrthoTrac practice management software, our add-on modules are all backed by Carestream Health's expert service and support.
