

Patient Journey

A clear presentation of treatment to aid patient understanding

Even with short simple courses patients can get confused with who, when and where treatments will occur and when stage payments are required. Complex cases, with choices which aren't necessarily made until some way through the course, will challenge even the most considered of patients. Now there is a new way to quickly and simply keep the patient in the picture using our 'Patient Journey' software.

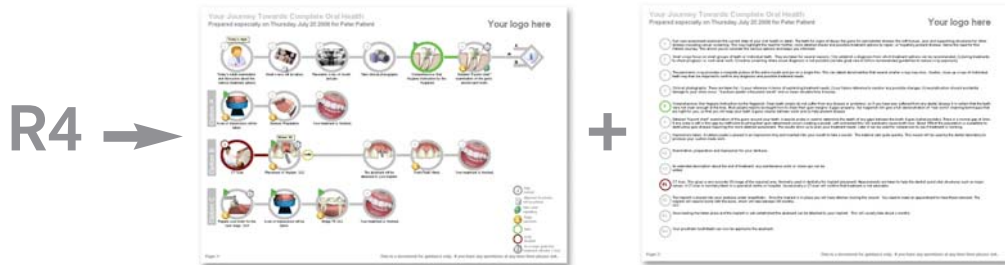

'Patient Journey' is a specialised flowcharting tool which will allow you to rapidly identify the important steps for the patient, produce an impressive journey for the patient to take away and satisfy your obligations to keep them informed.

A flowchart of treatment direct from R4

Enter your treatment in the normal way within R4. Click into 'Patient Journey' and instantly the presentation of treatment is transformed into a clear flowchart.

'Patient Journey' uses stock phrases to automatically write-up your proposal as a text document which supports the flowchart. Each phrase can be tailored to the individual and stored away for future use.

Complete Proposal

If you also use the Kodak Communicator the software will automatically select the appropriate patient advice sheets and print those with your patient journey. It will also link to the treatment animations so you can explain each step. In just a few seconds you can produce a comprehensive treatment proposal.

A journey your patient can really follow

It is common for you to consider a number of alternative treatments although presenting these choices to the patient can sometimes be a problem. 'Patient Journey' organises the treatments into an easy-to-follow flowchart, clearly showing at what stage in the course choices are required and what they involve.

Flexibility

A Patient Journey is made up of steps.

Here is a typical step.

Each element can be customised for the patient giving you amazing flexibility in the way in which you present treatment courses to your patients.
