

CUSTOMER TESTIMONIAL KODAK 9500 Cone Beam 3D System

Experience Pays Off with Mutual Benefits for the MALO CLINIC and Carestream

Testimonial

Established in 1995 by Paulo Malo, MALO CLINIC has quickly become the world's leader in Implantology and Dental Cosmetics. With its headquarters located in Lisbon, Portugal, and other clinics around the world, MALO CLINIC treats countless patients each year and performs a wide variety of complex procedures within its large and high-tech world class facilities.

MALO CLINIC is committed to providing high-quality care for patients by employing the latest technologies and utilizing the best materials available. Paulo Malo and his clinical team also focus on developing and improving rehabilitation solutions for partially and totally edentulous patients, by creating innovative surgical techniques, implant components, protocols, and products for their treatment. The team's most relevant accomplishment is the revolutionary All-on-4™ concept, which has been continuously improved and dentists across the world now use to treat edentulous patients.

Due to MALO CLINIC's outstanding reputation, it is all the more important for Paulo Malo and his team to use the best imaging products. MALO CLINIC considered the KODAK 9500 System to be the best choice to meet its current imaging needs and a valuable asset to remain at the forefront of the industry and continue setting groundbreaking new trends in Implantology, Oral Rehabilitation and Aesthetics.

As Paulo Malo explains, "it was imperative to have the best diagnostic tools at our disposal in order to provide rapid and effective treatment to our patients." By utilizing cone beam computed tomography (CBCT), the KODAK 9500 system allows images to be captured in just one turn, thus reducing the time required for an examination. In addition, the unit also offers higher precision without any gaps in information - all while using significantly less radiation.

**Paulo Malo, DDS, PhD, Oral Biology
President of MALO CLINIC Health
& Wellness**

Lisbon, Portugal

Dr. Paulo Malo earned his graduate degree at the Faculty of Dental Medicine from the University of Lisbon. In 1995, he founded MALO CLINIC. Huge success in the years that followed led to exponential growth, giving rise to one of the most international healthcare groups today: MALO CLINIC Health & Wellness.

Throughout his career, he has also received several distinctions and awards for his medical breakthroughs as well as management, leadership and entrepreneurial skills.

Carestream Product

- **KODAK 9500 System**

The MALO CLINIC team found that the KODAK 9500 system not only offered the highest image quality at the lowest possible radiation dose, but also featured numerous tools to promote efficiency.

While maintaining that the system's "image quality and low radiation dose alone were enough to make it a great choice for our practice", Paulo Malo also highlights the unit's time-savings features, "combined with the other aspects, the efficiency the system delivers makes this equipment a great solution to offer our patients."

Paulo Malo also found the unit's design and layout quite impressive. As he explains, the system is "similar to orthopantomography devices, which ensure the equipment integrates easily into all of our clinics. And, regardless of the location or dimension of the area, the unit's reduced proportions save space and allow to comfortably fitting the unit in smaller cabinets."

Along with the benefits of the current system, Paulo Malo is also quick to address the numerous benefits of the software included in the unit: "The program is very intuitive and allows users to easily obtain three-dimensional views from a multitude of perspectives and tomographic slices. This allows you to select the type of tissue you want to visualize, take measurements, and even place implants in a virtual environment. These features are not only great for surgery planning, but may also be a very helpful tool to use when explaining the treatment plan to patients making it easier for them to visualize the treatment."

Using state-of-the-art equipment, such as the KODAK 9500, to obtain complementary diagnostic exams, along with rigorous clinical and laboratory protocols, allows MALO CLINIC to continuously achieve a higher level of quality care, with impressive success rates (94.8% - 98.9%, with a follow-up up to 10 years as found in numerous Implantology studies published in international journals).

With such a track record, the MALO CLINIC's decision to have the KODAK 9500 system in their imaging equipment facilities is valuable not only for Carestream Dental, but also for the continuously development of new products and treatment solutions. Paulo Malo and his team can provide knowledgeable insight for future projects and help our Research and Development team improving existing features and continue to develop new ones by optimizing our existing equipment and software even further.
